RCTS

Regulatory Compliance Tracking Solution

SECURITY FOR THE INTERNAL THREAT

Most network security solutions may be effective against external intrusion, but do not protect organizations from employee actions taken internally. Our customers proactively seek innovative solutions to comply with regulations such as the Gramm-Leach-Bliley Data Protection Act, Sarbanes-Oxley, California Senate Bill 1386, HIPAA, and the USA Patriot Act. RCTS (Regulatory Compliance Tracking Solution) provides early warning notifications based on over 30 categories of pre-defined compliance violation rule sets.

WHAT IS RCTS?

RCTS enables organizations to comply with various forms of regulations and to protect the communication networks from misuse and abuse. RCTS is a comprehensive Information Technology (IT) solution that helps manage potential government act violations and abuse across your entire network with efficiency, simplicity, and reliability. RCTS enables the organization to capture, store, analyze, and report on any traffic that could be a possible regulatory violation.

HOW DOES IT WORK?

RCTS passively captures traffic, and then reports on any information or potential violations to either the GLBA, HIPAA, SOX, CSB 1386, or the USA Patriot Act. A full account of the violation is retained for further investigation or reporting. RCTS may be customized to store desired information for short term retrieval or archive for reporting at a later date.

Customers will want RCTS to detect unauthorized release of information unique to their specific industry — patient information, corporate proprietary information, financial data, insider trading, intellectual property, or other sensitive information. By protecting this information, RCTS helps ensure compliance with the Health Insurance Portability and Accountability Act (HIPAA), the Sarbanes-Oxley Act (SOX), the California Senate Bill 1386 (SB-1386), the Gramm-Leach-Bliley Data Protection Act, and the USA Patriot Act. Non-Compliance with these acts in today's environment is the kiss of death for an organization. There is no other tool on the market today which can ensure Company Executives are compliant across multiple governmental Acts.

WHY INVERNESS TECHNOLOGIES?

Each organization has distinctive needs and priorities when it comes to Regulatory Compliance Tracking Solutions. Whether you are interested in network security, or information protection, careful planning and design are critical to capitalize on the RCTS capabilities in the way that is right for you. Inverness Technologies' technical knowledge about the tool coupled with our understanding of the user's operational environment, requirements definition, network architecture and design, and end user support, enable Inverness to help you realize the full benefits of RCTS capabilities.

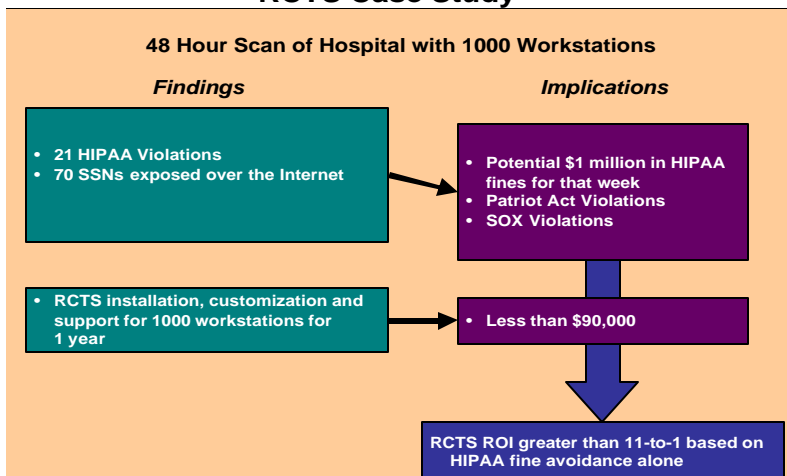

We leverage all our skills to design, implement, and support a RCTS tailored to your specific needs. We can perform an initial assessment of

your network to pinpoint areas requiring attention, and calculate your potential return on investment (ROI) for RCTS. We can customize RCTS to meet your unique compliance tracking requirements, assist in developing and implementing your Appropriate Use Policy (AUP), integrate the appliances into your network architecture, obtain appropriate system security certifications, provide formal training on the specific features of your RCTS and the business rules for its use, analyze and interpret unauthorized activity reports, and provide the most responsive Tier 1 and Tier 2 help desk support in the industry.

Inverness offers many procurement options, ranging from Purchase, Lease or Managed Service.
